Saving Water

It's important to save water because all living things need water to live. Also, if we don't save water there won't be enough water to go around. For example when I was in China there was a day where most faucets were not running. In some countries people don't have clean water. Without water all living things will die. There are lots of ways to save water.

One way to save water is to only use the sprinkler when the grass needs to be watered. That way, you won't use as much water. While your lawn is being watered you can have fun playing in the sprinkler. Another way to save water is to keep a pitcher in your refrigerator so you don't have to turn on the faucet to get cold water. Especially when it takes a long time to get cold water. Also, keep a barrel outside to get water to do things like watering your plants. Another way to save water is to take short showers. If you take long showers then it will use a lot of water. Also, when you are washing your vegetables keep a bowl under them and use that water to water your plants. When you wash your hands don't leave the water running when you get soap. Do the same when you brush your teeth. Don't leave the water running when you are brushing your teeth. Another way to save water is to not take baths. Baths use 37 gallons on average. Take short showers instead.

There are lots of ways to save water. Without water everything would die, so save water!
